

Student Assistant Project: Real-time Dashboard for HPC Activities

Description:

On the High Performance Computer HSUser, Slurm is used as a job scheduling system. While it gives every user via the command line information about the current status of jobs and job queues, we would like to have a Grafana based dashboard showing current information regarding the workload (overall, per partition) utilizing SLURM's REST API.

Prerequisites:

Linux and HPC affinity

Experiences with Grafana based stacks and time series databases favorable

Contact: Chair for High Performance Computing
